

Recombinant *P. falciparum* pLDH [His] (DAGA-217)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	<p><i>P. falciparum</i>, pLDH, Recomb.</p> <p>Plasmodium falciparum, Lactate Dehydrogenase (pLDH), Malaria, Recombinant</p> <p>Recombinant contains N-Terminal His tag.</p> <p>Molecular weight is 36 kDa measured by SDS-PAGE.</p>
Antigen Description	<p>Plasmodium falciparum is a protozoan parasite, one of the species of Plasmodium that cause malaria in humans. It is transmitted by the female Anopheles mosquito. This species causes the disease's most dangerous form, malignant or falciparum malaria. It has the highest complication rates and mortality. Around the world, malaria is the most significant parasitic disease of humans and claims the lives of more children worldwide than any other infectious disease.</p> <p>The 2015 World Health Organization report found 214 million cases of malaria worldwide. This resulted in an estimated 438,000 deaths. Rates of infection decreased from 2000 to 2015 by 37%, but increased from 2014's 198 million cases. In sub-Saharan Africa, over 75% of cases were due to <i>P. falciparum</i>, whereas in most other malarial countries, other, less virulent plasmodial species predominate. Almost every malarial death is caused by <i>P. falciparum</i>.</p>
Purity	≥ 95% pure (SDS-PAGE), Immobilized metal affinity chromatography (IMAC) using Ni (II)-NTA.
Conjugate	His
Applications	WB standard, antibody ELISA, immunogen, etc.
Molecular Weight	36 kDa
Format	Liquid
Concentration	Batch dependent - please inquire should you have specific requirements.

Size	1 mg
Buffer	0.01 M Sodium Phosphate, 0.15 mM Sodium Chloride, pH 7.4, and 1 M Sucrose.
Preservative	0.09% Sodium Azide
Storage	Upon receipt, store at -80°C. Aliquot to avoid multiple/freeze thaw cycles.
