

Mouse Anti Guinea Pig CD8 Monoclonal Antibody, FITC

DMABT-45243MG Mouse(CD8)

Lot. No. (See product label)

PRODUCT INFORMATION

Product Overview	Mouse Anti Guinea Pig CD8,FITC
Immunogen	Guinea pig peritoneal T-cells
Host	Mouse
Isotype	IgG1
Species	Guinea Pig
Clone	DU7
Conjugation	FITC
Applications	IHC, FCM,
Dilution	FCM: 0 - Neat

PACKAGING

Format	Purified IgG conjugated to Fluorescein Isothiocyanate Isomer 1 (FITC) - liquid
Protein Concentration	IgG concentration 0.1 mg/ml
Buffer	Phosphate buffered saline
Storage	Store at +4 °C for one month or at -20 °C for longer. This product should be stored undiluted. Avoid repeated freezing and thawing as this may denature the antibody. This product is photosensitive and should be protected from light. Should this product contain a precipitate we recommend microcentrifugation before use.
Preservative	0.09% Sodium Azide 1% Bovine Serum Albumin
Shelf Life	18 months from the date of despatch.

BACKGROUND

Introduction	CD8 is a 68 kDa disulphide-linked, transmembrane glycoprotein. The CD8 molecule serves as a receptor for MHC class I molecules and can mediate a function as a coreceptor in TCR-ligand binding and T-cell activation. Its cytoplasmic part is associated with the p56lck tyrosine kinase. CD8 is expressed by the great majority of cortical thymocytes and approximately 30% of medullary thymocytes, and by class I major histocompatibility complex restricted, mature suppressor/cytotoxic T cells. In addition a proportion of $\gamma\delta$ T cells and NK cells express CD8. Thus, CD8 is expressed by about 25-35% of peripheral T cells, and about 30% of NK cells express low levels of CD8. Immunophenotyping of lymphocytes is widely applied as a component of the testing of peripheral blood for diagnosis of immunodeficiencies such as acquired immunodeficiency syndrome (AIDS). An increase in the percentage of CD8-positive T cells has been reported during cytomegalovirus infection.
