

DiagNano™ Anti-Human IgA conjugated Gold Nanorods, diameter 50 nm, absorption max 700 nm

Cat.No: RHA-50-700

DESCRIPTION

Description	50 OD Anti-Human IgA conjugated gold nanorods with 50 nm diameter, longitudinal SPR absorbance max 700 nm. 250 OD concentrated nanorods are also available.
--------------------	---

APPLICATION

Application Notes	Gold Nanorods conjugates are suitable for dark-field microscopy, two-photon photoluminescence imaging, photoacoustic imaging, kinetic immunoassay, sensors, drug delivery and photothermal therapy.
--------------------------	---

PRODUCT INFORMATION

Diameter	50 nm
Length	110 nm
Ligand	Affinity purified anti-Human IgA (H+L)
Number of Particles	7.08E+11 particles/mL
Optical Density	50 OD (250 OD are also available.)
Absorption Max	700 nm

STORAGE AND SHIPPING

Storage Buffer	Buffer is customer determined.
-----------------------	--------------------------------

Storage	This product should be stored at 4°C after opening. Care must be taken to only use sterile glassware when working with this product.
Shelf Life	3 months
