

Absolute Mag™ Amine Magnetic Particles, Fluorescent Pink

Cat.No: WHM-S137

DESCRIPTION

Description

Absolute Mag™ Amine Magnetic Particles, Fluorescent Pink (# WHM-S137) are prepared by either staining the polystyrene core of the particles with a solution of appropriate fluorophore or by polymerizing a fluorophore in styrene in the presence of polystyrene core particles. They can be used for covalent coupling of proteins or ligands or used as fluorescent tracers for cell surface markers in fluorescence microscopy and flow cytometry.

APPLICATION

Application Notes

- Used for covalent coupling of proteins or ligands;
- Can be coated with Avidin, Biotin, Protein A, Goat anti-Mouse IgG, or other protein of interest;
- Used as fluorescent tracers for cell surface markers in fluorescence microscopy and flow cytometry.

PRODUCT INFORMATION

Particle Size	2.0-2.9 µm
---------------	------------

Functional Group	Amine
------------------	-------

Concentration	1.0% w/v
---------------	----------

Type Magnetization	Paramagnetic
--------------------	--------------

Matrix	Polystyrene
--------	-------------

STORAGE AND SHIPPING

Storage

Room temperature, do not freeze.
