CATALOG# 80552

MOUSE TESTOSTERONE ELISA KIT

Catalog number

Mouse Testosterone ELISA Kit80552

Intended use

A high quality enzymatic assay for the quantification of mouse testosterone in mouse serum and plasma.

Test principle

Crystal Chem's Mouse Testosterone ELISA kit is an enzymelinked immunosorbent assay based on the principle of competitive binding. An unknown amount of testosterone present in the sample and a defined amount of testosterone conjugated to horseradish peroxidase compete for the binding sites of testosterone antiserum coated to the wells of a microplate. After incubation and a wash step, a substrate solution is added, and the concentration of testosterone is inversely proportional to the optical density measured.

Specifications

Sample Types	Serum and Plasma
Assay Time	1.5 hours
Range	0.1 - 25 ng/mL
Sample Size	10 μL
Precision	CV < 10 %
Sensitivity	0.029 ng/mL

Highlights

- ✓ Kits use only 10 µL sample
- ✓ No separate extraction required
- √ High sensitivity (0.066 ng/mL)
- ✓ Low cost per sample

Summary of protocol
