| <b>Species</b>             | Homo sapiens (Human)                                                                                                                                                                                                                                                                               |
| <b>Target Names</b>        | LDHD                                                                                                                                                                                                                                                                                               |
| <b>Target Details</b>      | This protein belongs to the D-isomer specific 2-hydroxyacid dehydrogenase family. The similar protein in yeast has both D-lactate and D-glycerate dehydrogenase activities. Alternative splicing occurs at this locus and two transcript variants encoding distinct isoforms have been identified. |
