| <b>Relevance</b>           | Mediates NK cell adhesion and triggers NK cell effector functions. Binds two different NK cell receptors: CD96 and CD226. These interactions accumulates at the cell-cell contact site, leading to the formation of a mature immunological synapse between NK cell and target cell. This may trigger adhesion and secretion of lytic granules and IFN-gamma and activate cytotoxicity of activated NK cells. May also promote NK cell-target cell modular exchange, and PVR transfer to the NK cell. This transfer is more important in some tumor cells expressing a lot of PVR, and may trigger fratricide NK cell activation, providing tumors with a mechanism of immunoevasion. Plays a role in mediating tumor cell invasion and migration. Serves as a receptor for poliovirus attachment to target cells. May play a role in axonal transport of poliovirus, by targeting virion-PVR-containing endocytic vesicles to the microtubular network through interaction with DYNLT1. This interaction would drive the virus-containing vesicle to the axonal retrograde transport. <sup>2</sup> Publications |

#### Western blot

All lanes: Poliovirus receptor antibody at 3 $\mu$ g/ml

Lane 1: Mouse gonad tissue

Lane 2: HepG2 whole cell lysate

Lane 3: K562 whole cell lysate

Secondary

Goat polyclonal to rabbit IgG at 1/10000 dilution

Predicted band size: 46, 41, 40, 43 kDa

Observed band size: 46 kDa

#### Immunohistochemistry of paraffin-embedded

human placenta tissue using CSB-

PA019093ESR1HU at dilution of 1:100
