## S100a8 Antibody

| Product Code        | CSB-PA020641DA01MO  |
|---------------------|---|
| Abbreviation        | Protein S100-A8   |
| Storage             | Upon receipt, store at -20°C or -80°C. Avoid repeated freeze.   |
| Uniprot No.         | P27005  |
| Immunogen           | Recombinant Mouse Protein S100-A8 protein (2-89AA)  |
| Raised In           | Rabbit  |
| Species Reactivity  | Mouse   |
| Tested Applications | ELISA, WB; Recommended dilution: WB:1:500-1:5000  |
| Relevance           | S100A8 is a calcium- and zinc-binding protein which plays a prominent role in the regulation of inflammatory processes and immune response. It can induce neutrophil chemotaxis and adhesion. Predominantly found as calprotectin (S100A8/A9) which has a wide plethora of intra- and extracellular functions. The intracellular functions include: facilitating leukocyte arachidonic acid trafficking and metabolism, modulation of the tubulin-dependent cytoskeleton during migration of phagocytes and activation of the neutrophilic NADPH-oxidase. Activates NADPH-oxidase by facilitating the enzyme complex assembly at the cell membrane, transferring arachidonic acid, an essential cofactor, to the enzyme complex and \$100A8 contributes to the enzyme assembly by directly binding to NCF2/P67PHOX. The extracellular functions involve proinfammatory, antimicrobial, oxidant-scavenging and apoptosis-inducing activities. Its proinflammatory activity includes recruitment of leukocytes, promotion of cytokine and chemokine production, and regulation of leukacyte adhesion and migration. Acts as an alarmin or a danger associated molecular pattern (DAMP) molecule and stimulates innate immune cells via binding to pattern recognition receptors such as Toll-like receptor 4 (TLR4) and receptor for advanced glycation endproducts (AGER). Binding to TLR4 and AGER activates the MAP-kinase and NF-kappa-B signaling pathways resulting in the amplification of the proinflammatory cascade. Has antimicrobial activity towards bacteria and fungi and exerts its antimicrobial activity probably via chelation of Zn2+ which is essential for microbial growth. Can induce cell death via autophagy and apoptosis and this occurs through the cross-talk of mitochondria and lysosomes via reactive oxygen species (ROS) and the process involves BNIP3. Can regulate neutrophil number and apoptosis by an anti-apoptotic effect; regulates cell survival via ITGAM/ITGB and TLR4 and a signaling mechanism involving MEK-ERK. Its role as an oxidant scavenger has a protective role in prev |
| Form                | Liquid  |
| Conjugate           | Non-conjugated  |
| Storage Buffer      | Preservative: 0.03% Proclin 300<br>Constituents: 50% Glycerol, 0.01M PBS, PH 7.4  |

| Purification Method | >95%, Protein G purified   |
|---------------------|--|
| Isotype             | IgG  |
| Clonality           | Polyclonal   |
| Alias               | Protein S100-A8 (Calgranulin-A) (Chemotactic cytokine CP-10) (Leukocyte L1 complex light chain) (Migration inhibitory factor-related protein 8) (MRP-8) (p8) (Pro-inflammatory S100 cytokine) (S100 calcium-binding protein A8), S100a8, Caga Mrp8 |
| Species             | Mouse  |
| Research Area       | Neuroscience   |
| Target Names        | S100a8   |
| Image               | Western Blot   |
