Immunogen	Recombinant Human Ubiquitin-conjugating enzyme E2 variant 2 protein (2-145AA)
Raised In	Rabbit
Species Reactivity	Human
Tested Applications	ELISA
Relevance	Has no ubiquitin ligase activity on its own. The UBE2V2/UBE2N heterodimer catalyzes the synthesis of non-canonical poly-ubiquitin chains that are linked through 'Lys-63'. This type of poly-ubiquitination does not lead to protein degradation by the proteasome. Mediates transcriptional activation of target genes. Plays a role in the control of progress through the cell cycle and differentiation. Plays a role in the error-free DNA repair pathway and contributes to the survival of cells after DNA damage.
