| <b>Relevance</b>           | Acts as a receptor for urokinase plasminogen activator. Plays a role in localizing and promoting plasmin formation. Mediates the proteolysis-independent signal transduction activation effects of U-PA. It is subject to negative-feedback regulation by U-PA which cleaves it into an inactive form. |
| <b>Form</b>                | Liquid                                                                                                                                                                                                                                                                                                 |
