Relevance	LIN-41, also called tripartite motif-containing 71 (TRIM71), which was first identified in <i>Caenorhabditis elegans</i> , is responsible for the timing of cell fate determination. By encoding microRNAs (miRNAs), the heterochronic genes <i>let-7</i> and <i>lin-4</i> downregulate the gene encoding LIN-41. The miRNAs bind to six complementary sites on the 3' untranslated region (UTR) of the LIN-41 gene. This downregulation positively regulates the timing of the expression of LIN-29, an adult specification transcription factor.
