Relevance	TNIP3, which called LIND, that was upregulated in monocytes infected with <i>Listeria monocytogenes</i> . The predicted 325-amino acid protein contains 3 coiled-coil domains and is most likely localized to the nucleus. Binds to zinc finger protein TNFAIP3 and inhibits NF-kappa-B activation induced by tumor necrosis factor, Toll-like receptor 4 (TLR4), interleukin-1 and 12-O-tetradecanoylphorbol-13-acetate. Overexpression inhibits NF-kappa-B-dependent gene expression in response to lipopolysaccharide at a level downstream of TRAF6 and upstream of IKBKB. NF-kappa-B inhibition is independent of TNFAIP3 binding.
