IDH3B Antibody

one beta subunit, and one gamma subunit. The protein encoded by this gene is the beta subunit of one isozyme of NAD(+)-dependent isocitrate		
Uniprot No. O43837 Immunogen Fusion protein of Human IDH3B Raised In Rabbit Species Reactivity Human,Mouse,Rat Tested Applications ELISA,WB,IHC;ELISA:1:1000-1:2000,WB:1:200-1:1000,IHC:1:25-1:100 Relevance Isocitrate dehydrogenases catalyze the oxidative decarboxylation of isocitrate to 2-oxoglutarate. These enzymes belong to two distinct subclasses, one of which utilizes NAD(+) as the electron acceptor and the other NADP(+). Five isocitrate dehydrogenases have been reported: three NAD(+)-dependent isocitrate dehydrogenases, which localize to the mitochondrial matrix, and two NADP(+)-dependent isocitrate dehydrogenases, one of which is mitochondrial and the other predominantly cytosolic. NAD(+)-dependent isocitrate dehydrogenases catalyze the allosterically regulated rate-limiting step of the tricarboxylic acid cycle. Each isozyme is a heterotetramer that is composed of two alpha subunits, one beta subunit of one isozyme of NAD(+)-dependent isocitrate dehydrogenase. Three alternatively spliced transcript variants encoding different isoforms have been described for this gene. Form Liquid Conjugate Non-conjugated Storage Buffer -20°C, pH7.4 PBS, 0.05% NaN3, 40% Glycerol Purification Method Antigen affinity purification Isotype IgG Species Homo sapiens (Human)	Product Code	CSB-PA597290
Immunogen Fusion protein of Human IDH3B	Storage	Upon receipt, store at -20°C or -80°C. Avoid repeated freeze.
