| <b>Relevance</b>           | This gene encodes a member of the RSK (ribosomal S6 kinase) family of serine/threonine kinases. This kinase contains 2 non-identical kinase catalytic domains and phosphorylates several residues of the S6 ribosomal protein. The kinase activity of this protein leads to an increase in protein synthesis and cell proliferation. Amplification of the region of DNA encoding this gene and overexpression of this kinase are seen in some breast cancer cell lines. Alternate translational start sites have been described and alternate transcriptional splice variants have been observed but have not been thoroughly characterized. |
| <b>Form</b>                | Liquid                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## Image

The image on the left is immunohistochemistry of paraffin-embedded Human thyroid cancer tissue using CSB-PA620256(RPS6KB1 Antibody) at dilution 1/25, on the right is treated with fusion protein. (Original magnification: ×200)

Gel: 10%SDS-PAGE, Lysate: 40  $\mu$ g, Lane: 293T cells, Primary antibody: CSB-PA620256(RPS6KB1 Antibody) at dilution 1/200, Secondary antibody: Goat anti rabbit IgG at 1/8000 dilution, Exposure time: 45 seconds
