## Description

The Human Neurotrophin-3 (NT-3) ELISA KIT is the perfect tool for accurate and reliable detection of Neurotrophin-3 protein levels in human serum, plasma, and cell culture supernates.

NT-3, a protein encoded by the NTF3 gene in humans, plays a crucial role in the development and maintenance of the nervous system, making it a key research target in the field of neuroscience. Our ELISA kit offers a sensitive and specific way to quantitatively measure NT-3 levels, providing researchers with valuable insights into the role of this protein in various biological processes.

With a detection range of 1.25 ng/mL-80 ng/mL and a sensitivity of 0.31 ng/mL, this kit delivers accurate and reproducible results in just 1-5 hours. The assay principle is based on a sandwich ELISA method, ensuring high specificity and minimal interference from other proteins in the sample.

The kit is easy to use, with a sample volume of 50-100ul, and a detection wavelength of 450 nm. Our Human Neurotrophin-3 (NT-3) ELISA KIT is perfect for researchers in the field of neuroscience looking to quantify Neurotrophin-3 levels in human samples accurately. With more than three citations, our kit has been proven to deliver reliable and consistent results, making it a trusted choice

for researchers worldwide.
