

Human ovalbumin specific IgE,OVA sIgE ELISA Kit

Product Code	CSB-E09740h
Abbreviation	OVA sIgE
Target Name	ovalbumin specific IgE,OVA sIgE
Alias	N/A
Product Type	ELISA Kit
Immunogen Species	Homo sapiens (Human)
Sample Types	serum, plasma
Detection Range	Request Information
Sensitivity	Request Information
Assay Time	1-5h
Sample Volume	50-100ul
Detection Wavelength	450 nm
Lead Time	3-5 working days after you place the order, and it takes another 3-5 days for delivery via DHL or FedEx.
Research Area	Others
Tag Info	qualitative
Protein Description	Indirect

Description

The Human ovalbumin specific IgE (OVA sIgE) ELISA Kit is a powerful tool for researchers investigating IgE-mediated immune responses in humans. This kit is specifically designed to detect the ovalbumin-specific IgE protein in human serum and plasma samples.

The Human ovalbumin-specific IgE ELISA Kit provides a qualitative measurement of ovalbumin-specific IgE in samples from the human species. The assay principle is indirect, which ensures a highly sensitive and specific measurement of the ovalbumin-specific IgE protein.

The assay time for this kit is 1-5h, and the sample volume required for analysis is minimal, only 50-100ul. The detection wavelength for this assay is 450 nm, and the kit has been optimized to provide highly reproducible results.

This kit is an essential tool for researchers studying IgE-mediated immune responses in humans. It provides reliable and sensitive detection of ovalbumin specific IgE, making it an ideal solution for investigating the role of this protein in allergies and other immune-related disorders.
