

# Recombinant Bacillus subtilis Modification methylase BglII (bglIIM)

<b>Product Code</b>	CSB-EP670450BRI
<b>Relevance</b>	This methylase recognizes the double-stranded sequence AGATCT, causes specific methylation on C-5 on both strands, and protects the DNA from cleavage by the BglII endonuclease.
<b>Storage</b>	The shelf life is related to many factors, storage state, buffer ingredients, storage temperature and the stability of the protein itself. Generally, the shelf life of liquid form is 6 months at -20°C/-80°C. The shelf life of lyophilized form is 12 months at -20°C/-80°C.

## Reconstitution

We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Please reconstitute protein in deionized sterile water to a concentration of 0.1-1.0 mg/mL. We recommend to add 5-50% of glycerol (final concentration) and aliquot for long-term storage at -20°C/-80°C. Our default final concentration of glycerol is 50%. Customers could use it as reference.
