| <b>Target Names</b>        | NIFK                                                                                                                                                                                                                                                              |
| <b>Target Details</b>      | This gene encodes a protein that interacts with the forkhead-associated domain of the Ki-67 antigen. The encoded protein may bind RNA and may play a role in mitosis and cell cycle progression. Multiple pseudogenes exist on chromosomes 5, 10, 12, 15, and 19. |
