| <b>Target Names</b>        | NLRP1                                                                                                                                                                                                                                                               |

## Image

Immunofluorescence staining of SH-SY5Y cells with CSB-PA871630EA01HU at 1:133, counter-stained with DAPI. The cells were fixed in 4% formaldehyde, permeabilized using 0.2% Triton X-100 and blocked in 10% normal Goat Serum. The cells were then incubated with the antibody overnight at 4°C. The secondary antibody was Alexa Fluor 488-conjugated AffiniPure Goat Anti-Rabbit IgG(H+L).
