

Phospho-Histone H2AX (S139) Recombinant Monoclonal Antibody

Product Code	CSB-RA010097A139phHU
Abbreviation	Histone H2AX
Storage	Upon receipt, store at -20°C or -80°C. Avoid repeated freeze.
Uniprot No.	P16104
Immunogen	A synthesized peptide
Species Reactivity	Human
Tested Applications	ELISA, WB, IHC; Recommended dilution: WB:1:500-1:5000, IHC:1:50-1:200
Relevance	Variant histone H2A which replaces conventional H2A in a subset of nucleosomes. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling. Required for checkpoint-mediated arrest of cell cycle progression in response to low doses of ionizing radiation and for efficient repair of DNA double strand breaks (DSBs) specifically when modified by C-terminal phosphorylation.
Form	Liquid
Conjugate	Non-conjugated
Storage Buffer	Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol.
Purification Method	Affinity-chromatography
Isotype	Rabbit IgG
Clonality	Monoclonal
Alias	Histone H2AX, H2a/x, Histone H2A.X, H2AFX, H2AX
Immunogen Species	Homo sapiens (Human)
Research Area	Epigenetics and Nuclear Signaling
Gene Names	H2AFX
Clone No.	1F10
Image	

Western Blot

Positive WB detected in: 293 whole cell lysate

All lanes: Phospho-Histone H2AX (S139)

antibody at 0.23 µg/ml

Secondary

Goat polyclonal to rabbit IgG at 1/50000 dilution

Predicted band size: 15 KDa

Observed band size: 15 KDa

IHC image of CSB-RA010097A139phHU diluted at 1:100 and staining in paraffin-embedded human brain tissue performed on a Leica BondTM system. After dewaxing and hydration, antigen retrieval was mediated by high pressure in a citrate buffer (pH 6.0). Section was blocked with 10% normal goat serum 30min at RT. Then primary antibody (1% BSA) was incubated at 4°C overnight. The primary is detected by a biotinylated secondary antibody and visualized using an HRP conjugated SP system.

Description

The synthesized DNA sequence corresponding to the phospho-Histone H2AX (S139) monoclonal antibody was cloned into the plasmid and then transfected into the cell line for expression. The monoclonal antibody against phospho-Histone H2AX (S139) was generated from the animals immunized by phospho-peptide containing human Histone H2AX S139 site. The product was purified through the affinity-chromatography method and obtained the phospho-Histone H2AX (S139) recombinant monoclonal antibody. This phospho-Histone H2AX (S139) recombinant antibody is a rabbit IgG and has been tested in scientific applications, including ELISA, WB, and IHC. It only recognizes phosphorylated serine 139 of human H2AX.

The S139 phosphorylated H2AX, also termed γ H2AX, is a sensitive marker for DNA double-strand breaks (DSBs) and is responsible for the recruitment of cell cycle checkpoint and DNA repair factors to the damaged site.
