Description

Recombinant novel coronavirus (SARS-CoV-2) nucleoprotein (N) is a full-length protein derived from the yeast cells. The expression region of this protein is the 1-419AA of human SARS-CoV-2-N protein. It carries an N-terminal 6xHis-PDI-tag and has a calculated molecular weight of 104.5 kDa. Its purity is greater than 85% determined by SDS-PAGE analysis. It is in-stock now. This recombinant human SARS-CoV-2-N protein may be used to produce specific antibodies or in the studies of microbiology.

Reconstitution

We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Please reconstitute protein in deionized sterile water to a concentration of 0.1-1.0 mg/mL. We recommend to add 5-50% of glycerol (final concentration) and aliquot for long-term storage at -20°C/-80°C. Our default final concentration of glycerol is 50%. Customers could use it as reference.
