

GABRA2 Polyclonal Antibody

Catalog Number: E91803 Amount: 100ul

Background: GABA is the major inhibitory neurotransmitter in the mammalian brain where it acts at

GABA-A receptors, which are ligand-gated chloride channels. Chloride conductance of these channels can be modulated by agents such as benzodiazepines that bind to the GABA-A receptor. At least 16 distinct subunits of GABA-A receptors have been identified. Alternatively spliced transcript variants encoding the same protein have been found for this

gene. [provided by RefSeq, Jul 2008]
