Cellular localization:	Cytoplasm, Golgi apparatus, Mitochondrion, Nucleus
Relevance:	Putative oxidoreductase. Acts as a tumor suppressor and plays a role in apoptosis. Required for normal bone development . May function synergistically with p53/TP53 to control genotoxic stress-induced cell death. Plays a role in TGFB1 signaling and TGFB1-mediated cell death. May also play a role in tumor necrosis factor (TNF)-mediated cell death. Inhibits Wnt signaling, probably by sequestering DVL2 in the cytoplasm.
