| <b>Background:</b>            | This gene encodes a GTP-binding protein that belongs to the small GTPase superfamily and Ras family of proteins. GTP-binding proteins mediate the transmembrane signaling initiated by the occupancy of certain cell surface receptors. |
| <b>Gene ID:</b>               | 5899                                                                                                                                                                                                                                    |
