Gene Name	TGIF2LX TGIFLX
Accession No.	Q8IUE1
Description	TGFB induced factor homeobox 2 like, X-linked(TGIF2LX) Homo sapiens This gene encodes a member of the TALE/TGIF homeobox family of transcription factors. Testis-specific expression suggests that this gene may play a role in spermatogenesis. A homolog of this gene lies within the male specific region of chromosome Y, in a block of sequence that is thought to be the result of a large X-to-Y transposition. [provided by RefSeq, Jul 2008],
