

Cat. No. MHC-HM40C

Description	
Source	Recombinant Human HLA-E*01:03&B2M&Peptide (VMAPKTLVL) Monomer Negative Control Protein is expressed from HEK293 with His tag and Avi at the C-Terminus. It contains Gly22-Thr302(HLA-E*01:03), Ile21-Met119(B2M) and VMAPKTLVL peptide.
Accession	P13747(HLA-E*01:03)&P61769(B2M)&VMAPKTLVL
Molecular Weight	The protein has a predicted MW of 50.2 kDa. Due to glycosylation, the protein migrates to 52-62 kDa based on Bis-Tris PAGE result.
Endotoxin	Less than 1 EU per µg by the LAL method.
Purity	> 95% as determined by Bis-Tris PAGE > 95% as determined by HPLC

Formulation and Storage	
Formulation	Lyophilized from 0.22 µm filtered solution in PBS (pH 7.4). Normally 8% trehalose is added as protectant before lyophilization.
Reconstitution	Dissolve the lyophilized protein in distilled water. Please refer to the Certificate of Analysis for detailed instructions.
Storage	-20 to -80°C for 12 months as supplied from date of receipt.-80°C for 3 months after reconstitution.Recommend to aliquot the protein into smaller quantities for optimal storage. Please minimize freeze-thaw cycles.

Background	
HLA-E is a nonclassical member of the major histocompatibility complex class I gene locus. HLA-E protein shares a high level of homology with MHC Ia classical proteins: it has similar tertiary structure, associates with β2-microglobulin, and is able to present peptides to cytotoxic lymphocytes. The main function of HLA-E under normal conditions is to present peptides derived from the leader sequences of classical HLA class I proteins, thus serving for monitoring of expression of these molecules performed by cytotoxic lymphocytes.	

Assay Data

Bis-Tris PAGE

SEC-HPLC

Assay Data

The purity of Human HLA-E*01:03&B2M&Peptide (VMAPKTLVL) Monomer Negative Control is greater than 95% as determined by SEC-HPLC.
