Description	SPV 106 is the first mixed activator/inhibitor of Histone acetyltransferases (HATs), potentiates p300/CBP-associated factor (PCAF) HAT activity while inhibiting those of p300/CBP and recombinant CBP; significantly increases the H3 acetylation level in U937 cells, but no detectable effect on the acetylation level of the non-histone substrate a-tubulin; restores normal levels of H3K9Ac and H3K14Ac, reduces DNA CpG hypermethylation, and recovers D-CMSC proliferation and differentiation, enhances memory for fear extinction and prevents fear renewal in mice.
