Chemical Name : 4(1H)-Pyrimidinone, 2,3-dihydro-5,6-bis[(phenylmethylene)amino]-2-thio-

Description : SCR7 is a specific inhibitor of nonhomologous end-joining (NHEJ), blocks Ligase IV-mediated joining by interfering with its DNA binding but not that of T4 DNA Ligase or Ligase I; inhibits NHEJ in a Ligase IV-dependent manner within cells, causes accumulation of double-strand breaks (DSBs), and activates the intrinsic apoptotic pathway; decreases cell proliferation of MCF7, A549, and HeLa with IC₅₀ of 40, 34, and 44 μM, respectively; increases the efficacy of DSB-inducing therapeutic modalities in mouse xenografts; increases the efficiency of precise genome editing with CRISPR-Cas9 in mammalian cell lines and in mice.
