

Product Name	: Khellin
Synonyms	: Khellin; Amiptan; Benecardin; Keloid; Khellin; Lynamine; Mefurina; Rykellin; Viscardan
Cat No.	: M16050
CAS Number	: 82-02-0
Molecular Formula	: C ₁₄ H ₁₂ O ₅
Formula Weight	: 260.25
Chemical Name	: 4,9-Dimethoxy-7-methyl-5H-furo(3,2-g)(1)benzopyran-5-one
Description	: A vasodilator that also has bronchodilatory action. It has been employed in the treatment of angina pectoris, in the treatment of asthma, and in conjunction with ultraviolet light A, has been tried in the treatment of vitiligo.
Pathway	: Others
Target	: Other Targets
Receptor	: Others
Solubility	: DMSO: 10 mM
SMILES	: <chem>O=C1C=C(C)OC2=C(OC)C(OC=C3)=C3C(OC)=C12</chem>
Storage	: (-20°C)
Stability	: ≥ 2 years
