| <b>Formula Weight</b>    | : 352.8                                                                                                                                                                                             |
| <b>Chemical Name</b>     | : —                                                                                                                                                                                                 |
| <b>Description</b>       | : Pomalidomide-C2-NH <sub>2</sub> hydrochloride is a synthesized E3 ligase ligand-linker conjugate that incorporates the Pomalidomide based cereblon ligand and a linker used in PROTAC technology. |
| <b>Pathway</b>           | : PROTACs                                                                                                                                                                                           |
| <b>Target</b>            | : E3 Ligase Ligand                                                                                                                                                                                  |
| <b>Receptor</b>          | : cereblon (CRBN) E3 ligase                                                                                                                                                                         |
| <b>Solubility</b>        | : —                                                                                                                                                                                                 |
