CDC34 cDNA

Catalog Number: ATGD0073

General Description

CDC34 is a member of the ubiquitin-conjugating enzyme family. ubiquitin-conjugating enzyme catalyzes the covalent attachment of ubiquitin to other proteins. This protein is a part of the large multiprotein complex, which is required for ubiquitin-mediated degradation of cell cycle G1 regulators, and for the initiation of DNA replication. CDC34 is thought to be the structural and functional homolog of *Saccharomyces cerevisiae* CDC34, which is essential for the G1 to S phase transition.
