pATGen (puc19-derived cloning vector)

General Description

MAFF cDNA

Catalog Number: ATGD0423

MAFF is a basic leucine zipper (bZIP) transcription factor that lacks a transactivation domain. It is known to bind the US-2 DNA element in the promoter of the oxytocin receptor (OTR) gene and most likely heterodimerizes with other leucine zipper-containing proteins to enhance expression of the OTR gene during term pregnancy. Multiple transcript variants encoding two different isoforms have been found for this gene.
