BACKGROUND

Description

Vaspin (visceral adipose-specific SERPIN), a newly identified adipokine, which is a member of serine protease

Recombinant human Serpin A12/Vaspin protein

Catalog Number: VAS0701

inhibitor family. Vaspin is also a unique insulin sensitizing adipocytokine in obesity. A recent publication indicates that induction of human vaspin mRNA expression in adipose tissue is regulated in a fat depot-specific manner and could be associated with parameters of obesity, insulin resistance, and glucose metabolism. Recombinant human Vaspin fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography techniques
