Flow cytometric analysis of human CEACAM6 expression on human whole blood granulocytes. Human whole blood granulocytes were stained with PE-conjugated anti-Human CEACAM6. The histogram were derived from gated events with the forward and side light-scatter characteristics of viable granulocytes.

Flow cytometry was performed on a BD FACSCalibur flow cytometry system. Please refer to www.sinobiological.com/Flow-Cytometry-FACS-Protocols-a-750.html for technical protocols.
