Flow cytometric analysis of Human CRTAM(CD355) expression on human whole blood lymphocytes. Cells were stained with APC-conjugated anti-Human CRTAM(CD355). The fluorescence histograms were derived from gated events with the forward and side light-scatter characteristics of viable lymphocytes.

Flow cytometry was performed on a BD FACSCalibur flow cytometry system. Please refer to [www.sinobiological.com/Flow-Cytometry-FACS-Protocols-a-750.html](http://www.sinobiological.com/Flow-Cytometry-FACS-Protocols-a-750.html) for technical protocols.
