# Rhesus CTLA4 Gene ORF cDNA clone in cloning vector

Catalog Number: CG90213-G

# **General Information**

Gene :	cytotoxic protein 4	T-lymphocyte-associated
Official Symbol :	CTLA4	
Synonym :	CTLA-4	
Source :	Rhesus	
cDNA Size:	672bp	
RefSeq :	NM_001044739.1	
Plasmid:	PGEM-cynoCT	LA4

## Description

Lot : Please refer to the label on the tube

## **Sequence Description :**

Identical with the Gene Bank Ref. ID sequence except for the point mutations: 264A/G not causing the amino acid variation.

Vector :

pGEM-T

## **Quality control :**

The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.

## Sequencing primer list :

M13-47 : 5' GCCAGGGTTTTCCCAGTCACGAC 3' RV-M : 5' GAGCGGATAACAATTTCACACAGG 3'

Other M13 primers can also be used as sequencing primers.

Each tube contains approximately 10 µg of lyophilized plasmid.

#### Storage :

The lyophilized plasmid can be stored at ambient temperature for three months.

# **Plasmid Resuspension protocol**

1. Centrifuge at 5,000  $\times$  g for 5 min.

2. Carefully open the tube and add 100  $\mu l$  of sterile water to

dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room

temperature.

4. Briefly vortex the tube and then do a quick spin to concentrate

the liquid at the bottom. Speed is less than  $5000 \times g$ .

5. Store the plasmid at -20 °C.

## The plasmid is ready for:

- Restriction enzyme digestion
- PCR amplification
- E. coli transformation
- DNA sequencing

# *E.coli* strains for transformation (recommended but not limited)

Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5 $\alpha$  and TOP10F'.

# Rhesus CTLA4 Gene ORF cDNA clone in cloning vector

Catalog Number: CG90213-G

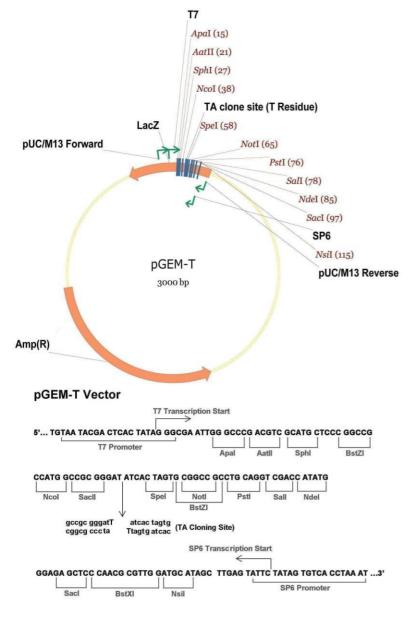

# **Vector Information**

The pGEM-T vector is a high-efficiency TA cloning vector which contains multiple cloning sites as shown below. The pGEM-T vector is 3.0kb in size and contains the ampicillin resistance gene for selection. The coding sequence was inserted by TA cloning.

Notes: The direction of cDNA insertion into the TA-cloning vector is random, maybe forward or reverse. For insert orientation information, please feel free to contact us.

#### Physical Map of pGEM-T :
