# pCMV3-C-HA Negative Control Vector (C-terminal HA-tagged)

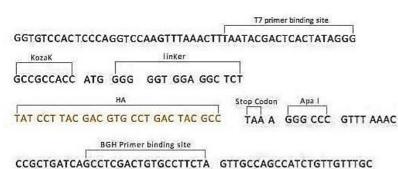

Catalog Number: CV013

# **Physical Map**

Vector Name	pCMV3-C-HA-NCV
Vector Size	5956bp
Vector Type	Mammalian Expression Vector
Expression Method	Constitutive, Stable / Transient
Promoter	CMV
Antibiotic Resistance	Kanamycin
Selection In Mammalian Cells	Hygromycin
Protein Tag	НА
Sequencing Primer	Forward:T7(TAATACGACTCACTATAGGG) Reverse:BGH(TAGAAGGCACAGTCGAGG)

## Schematic of pCMV3-C-HA-NCV (Negative Control **Vector) Multiple Cloning Sites**

Negative control for the pCMV3-C-HA clone.

**Physical Introduction** 

- Vector sequence is the same as pCMV3-C-HA, but multiple cloning sites are removed.
- > Designed for mammalian expression, stable or transient.
- >Hygromycin resistance gene for selection of stable cell lines.

## Description

Please refer to the label on the tube Lot :

#### Shipping carrier :

Each tube contains approximately 10 µg of lyophilized plasmid.

#### Storage :

The lyophilized plasmid can be stored at ambient temperature for three months.

### **Plasmid Resuspension protocol**

- 1. Centrifuge at  $5,000 \times g$  for 5 min.
- 2. Carefully open the tube and add 100  $\mu$ l of sterile water
- to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.

5. Store the plasmid at -20 °C.

#### The plasmid is ready for:

- Restriction enzyme digestion
- PCR amplification
- · E. coli transformation
- DNA sequencing
