Human KCNMB3 transcript variant 4 Gene cDNA clone plasmid

Catalog Number: HG13700-G

General Information

Gene: potassium large conductance calcium-

activated channel, subfamily M beta

member 3, transcript variant 4

Official Symbol: KCNMB3

Synonym: HBETA3, KCNMB2, KCNMBL, BKBETA3,

SLOBETA3, KCNMB3

Source: Human

cDNA Size: 840bp

RefSeq: NM_014407.3

Plasmid: pGEM-KCNMB3

Description

Lot: Please refer to the label on the tube

Sequence Description:

Identical with the Gene Bank Ref. ID sequence except for the point mutation 385 T/C resulting in the amino acid Phe substitution by Leu.

Vector:

pGEM-T

Shipping carrier:

Each tube contains approximately 10 µg of lyophilized plasmid.

Storage:

The lyophilized plasmid can be stored at ambient temperature for three months.

Quality control:

The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.

Sequencing primer list:

5' GCCAGGGTTTTCCCAGTCACGAC 3' M13-47:

RV-M: 5' GAGCGGATAACAATTTCACACAGG 3'

Other M13 primers can also be used as sequencing primers.

Plasmid Resuspension protocol

- 1. Centrifuge at $5,000 \times g$ for 5 min.
- 2.Carefully open the tube and add 100 µl of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin to concentrate
- the liquid at the bottom. Speed is less than $5000 \times g$.
- 5.Store the plasmid at -20 °C.

The plasmid is ready for:

- · Restriction enzyme digestion
- PCR amplification
- · E. coli transformation
- DNA sequencing

E.coli strains for transformation (recommended but not limited)

Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5α and TOP10F'.

Human KCNMB3 transcript variant 4 Gene cDNA clone plasmid

Catalog Number: HG13700-G

Vector Information

The pGEM-T vector is a high-efficiency TA cloning vector which contains multiple cloning sites as shown below. The pGEM-T vector is 3.0kb in size and contains the amplicin resistance gene for selection. The coding sequence was inserted by TA cloning.

Physical Map of pGEM-T:
