# Human ETS2 Gene ORF cDNA clone expression plasmid, N-HA tag

Catalog Number: HG17994-NY

#### **General Information**

Gene :	v-ets avian erythroblastosis virus E26 oncogene homolog 2
Official Symbol :	ETS2
Synonym :	ETS2
Source :	Human
cDNA Size:	1452bp (cDNA Size= Gene + linker +Tags)
RefSeq :	NM_005239.5
Plasmid:	pCMV3-HA-ETS2

#### Description

Lot : Please refer to the label on the tube

**Sequence Description :** 

Identical with the Gene Bank Ref. ID sequence.

Restriction site: Kpnl + Xbal(6kb+1.45kb)

Vector : pCMV3-N-HA

Quality control :

The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.

#### Sequencing primer list :

pCMV3-F:	5' CAGGTGTCCACTCCCAGGTCCAAG 3'
pcDNA3-R :	5' GGCAACTAGAAGGCACAGTCGAGG 3'
Or	
Forward T7 :	5' TAATACGACTCACTATAGGG 3'
ReverseBGH :	5' TAGAAGGCACAGTCGAGG 3'

pCMV3-F and pcDNA3-R are designed by Sino Biological Inc. Customers can order the primer pair from any oligonucleotide supplier.

#### Shipping carrier :

Each tube contains approximately 10  $\mu g$  of lyophilized plasmid. **Storage :** 

The lyophilized plasmid can be stored at ambient temperature for three months.

#### **Plasmid Resuspension protocol**

- 1. Centrifuge at 5,000  $\times$  g for 5 min.
- 2. Carefully open the tube and add 100  $\mu l$  of sterile water to

dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room

temperature.

4. Briefly vortex the tube and then do a quick spin to concentrate

the liquid at the bottom. Speed is less than  $5000 \times g$ .

5. Store the plasmid at  $\$ -20  $^\circ\! {\rm C}.$ 

#### The plasmid is ready for:

- Restriction enzyme digestion
- PCR amplification
- E. coli transformation
- DNA sequencing

### *E.coli* strains for transformation (recommended but not limited)

Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5 $\alpha$  and TOP10F<sup>'</sup>.</sup>

# Human ETS2 Gene ORF cDNA clone expression plasmid, N-HA tag

Catalog Number: HG17994-NY

### **Vector Information**

All of the pCMV vectors are designed for high-level stable and transient expression in mammalian hosts. High-level stable and non-replicative transient expression can be carried out in most mammalian cells. The vectors contain the following elements:

•Human enhanced cytomegalovirus immediate-early (CMV) promoter for high-level expression in a wide range of mammalian cells.

• Hygromycin resistance gene for selection of mammalian cell lines.

• A Kozak consensus sequence to enhance mammalian expression.

#### Vector name pCMV3-N-HA Vector size 6101bp Vector Type Mammalian Expression Vector **Expression Method** Constiutive ,Stable / Transient Promoter CMV **Bacterial Resistance** Kanamycin Selection In Cells Hygromycin Protein tag HA

#### **Physical Map of Plasmid :**
