# **Anti-Cyclophilin A/PPIA Magnetic Beads Immunoprecipitation (IP) Kit**

**Catalog Number: MB203608-T44**

Please read this instruction manual carefully before using the product

## Product Contents

|   | Contents                                              | Package 1 (20 Tests)                         | Package 2 (100 Tests) | Storage             |
|---|-------------------------------------------------------|----------------------------------------------|-----------------------|---------------------|
| 1 | Anti-Cyclophilin A/PPIA Magnetic Beads <sup>1 3</sup> | 1 mL                                         | 5 mL                  | 2-8°C for 12 months |
| 2 | NP40 Cell Lysis Buffer <sup>2</sup>                   | 4 mL                                         | 22 mL                 | -20°C for 12 months |
| 3 | 5×TBST (pH7.4)                                        | Required but not supplied                    |                       |                     |
| 4 | 1×TBST (pH7.4)                                        | Required but not supplied                    |                       |                     |
| 5 | ddH <sub>2</sub> O                                    | Required but not supplied                    |                       |                     |
| 6 | Alkaline Elution Buffer                               | 3 mL                                         | 15 mL                 | 2-8°C for 12 months |
| 7 | Acidity Elution Buffer                                | 3 mL                                         | 15 mL                 | 2-8°C for 12 months |
| 8 | Neutralization Buffer                                 | 2 mL                                         | 8 mL                  | 2-8°C for 12 months |
| 9 | Magnetic Separator                                    | One Simple Magnetic Separator (Cat# MAGS001) |                       |                     |

[1] The IP KIT contains anti-Cyclophilin A/PPIA Immunomagnetic Beads(2 mg/mL) in phosphate buffered saline (PBS, pH 7.4) with sodium azide (0.1%).

**[2] Using NP-40 cell lysis buffer in the kit is required, otherwise, the magnetic beads may be precipitated.**

[3] Immunomagnetic Beads kits are shipped at ambient temperature in which immunomagnetic beads are provided in liquid buffer.

## Product Description

The Anti-Cyclophilin A/PPIA Immunomagnetic Beads, conjugated with Anti-Cyclophilin A/PPIA antibody, are used for immunoprecipitation (IP) of Cyclophilin A/PPIA proteins which expressed in vitro expression systems and bacterial and mammalian cell lysates.

For IP, the beads are added to a sample containing Cyclophilin A/PPIA proteins to form a bead-protein complex. The complex is removed from the solution manually using a Magnetic Separator. The bound Cyclophilin A/PPIA proteins are dissociated from the Immunomagnetic Beads using an elution buffer.

Fig. 1 Immunoprecipitation (IP) Protocol

## Antibody Information

|                           |                                                                                                                                        |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Antibody:</b>          | Cyclophilin A/PPIA Antibody, Rabbit PAb, Antigen Affinity Purified (Cat# 203608-T44)                                                   |
| <b>Immunogen:</b>         | E. coli-derived Human Cyclophilin A/PPIA fragment                                                                                      |
| <b>Isotype:</b>           | Rabbit IgG                                                                                                                             |
| <b>Specificity:</b>       | Human Cyclophilin A/PPIA                                                                                                               |
| <b>Preparation:</b>       | Produced in rabbits immunized with E. coli-derived Human Cyclophilin A/PPIA fragment, and purified by antigen affinity chromatography. |
| <b>Applications:</b>      | IP, Minimum Protein Purification                                                                                                       |
| <b>Alternative Names:</b> | PPIA                                                                                                                                   |

## Protocol

The protocol (Fig. 1) uses 50  $\mu$ L Anti-Cyclophilin A/PPIA Immunomagnetic Beads, but this can be scaled up or down as required.

### Cell Lysis

Cells may be lysed using any standard cell lysis protocol in accordance with your starting materials. **We suggest using NP40 Cell Lysis Buffer (supplied with kit).**

### Immunoprecipitate Target Antigen

1. Add 50  $\mu$ L of Immunomagnetic Beads into a 1.5 mL microcentrifuge tube.
2. Add 150  $\mu$ L of 1 $\times$  TBST buffer to the Immunomagnetic Beads and gently vortex to mix.
3. Place the tube into a Magnetic Separator to collect the beads against the wall side of the tube. Remove and discard the supernatant.
4. Add 1 mL of 1 $\times$  TBST buffer to the tube. Invert the tube several times or gently vortex to mix for 1 min. Collect Immunomagnetic Beads with a Magnetic Separator. Remove and discard the supernatant.
5. Add the sample containing target protein (Cell lysate: 0.5-1mg; Recombinant protein: 5-25  $\mu$ g) to the pre-washed Immunomagnetic Beads, add 1 $\times$  TBST buffer until final volume to 200-500  $\mu$ L, and incubate at 37 $^{\circ}$ C for 20-30 min (or at room temperature for 2-3h) with mixing.
6. Collect the Immunomagnetic Beads with a Magnetic Separator, remove the unbounded sample and save for analysis.
7. Add 300  $\mu$ L of 5 $\times$  TBST buffer to the tube and gently mix. Collect the Immunomagnetic Beads and discard the supernatant. Repeat this wash twice.
8. Add 300  $\mu$ L of ddH<sub>2</sub>O to the tube and gently mix. Collect the Immunomagnetic Beads on a Magnetic Separator and discard the supernatant.

### Elute Target Antigen.

#### A. Alkaline Elution

1. Add 100  $\mu$ L of Alkaline Elution buffer to the tube.
2. Gently vortex to mix and incubate the sample at room temperature on a rotator for 5 min.
3. Magnetically separate the Immunomagnetic Beads and save the supernatant containing the target antigen.
4. To neutralize the sample, add 50  $\mu$ L of Neutralization Buffer for each 100  $\mu$ L of eluate.

#### B. Acidity Elution

1. Add 100  $\mu$ L Acidity Elution Buffer.
2. Gently vortex to mix and incubate the sample at room temperature on a rotator for 5-10 min.
3. Magnetically separate the Immunomagnetic Beads and save the supernatant containing the target antigen.
4. To neutralize the low pH, add 15  $\mu$ L of Neutralization Buffer for each 100  $\mu$ L of eluate.

#### C. Denaturing Elution

1. Add 10  $\mu$ L of 2 $\times$  SDS-PAGE Sample Loading Buffer to the tube.
2. Gently vortex to mix and incubate the sample at 95-100  $^{\circ}$ C for 5-10 min.
3. Magnetically separate the Immunomagnetic Beads and save the supernatant containing the antigen.

### General Test System of Sino Biological Inc. (for reference) :

|                | Recombinant Protein                                                  | Cell Lysate |
|----------------|----------------------------------------------------------------------|-------------|
| Sample Quality | 10 $\mu$ g add into 0.5mg cell lysate (without interfering proteins) | 0.5mg       |
| Final Volume   | 300 $\mu$ L                                                          |             |
| Incubate Time  | Room temperature, 2h                                                 |             |
| Elute          | Using 10 $\mu$ L of 2 $\times$ SDS-PAGE Sample Loading Buffer        |             |
