# Mouse EFNA1 Gene ORF cDNA clone in cloning vector

Catalog Number: MG50593-M

# **General Information**

Gene :	ephrin A1

Official Symbol : EFNA1

Synonym : Al325262; B61; Efl1; Epl1; Eplg1; Lerk1

Source : Mouse

cDNA Size: 618bp

- **RefSeq :** NM\_010107.4
- Plasmid: PMD-mEFNA1

# Description

Lot : Please refer to the label on the tube

#### **Sequence Description :**

Identical with the Gene Bank Ref. ID sequence.

Vector :

pMD18-T Simple

#### **Quality control :**

The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.

#### Sequencing primer list :

M13-47 : 5' GCCAGGGTTTTCCCAGTCACGAC 3'

RV-M : 5' GAGCGGATAACAATTTCACACAGG 3'

Other M13 primers can also be used as sequencing primers.

#### Shipping carrier :

Each tube contains approximately 10 µg of lyophilized plasmid.

#### Storage :

The lyophilized plasmid can be stored at ambient temperature for three months.

# **Plasmid Resuspension protocol**

1. Centrifuge at 5,000  $\times$  g for 5 min.

2. Carefully open the tube and add 100  $\mu l$  of sterile water to

dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room

temperature.

4. Briefly vortex the tube and then do a quick spin to concentrate

the liquid at the bottom. Speed is less than  $5000 \times g$ .

5. Store the plasmid at  $\$ -20  $^\circ\!\mathrm{C}.$ 

#### The plasmid is ready for:

- Restriction enzyme digestion
- PCR amplification
- E. coli transformation
- DNA sequencing

# *E.coli* strains for transformation (recommended but not limited)

Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5 $\alpha$  and TOP10F  $\dot{}$  .

# Mouse EFNA1 Gene ORF cDNA clone in cloning vector

Catalog Number: MG50593-M

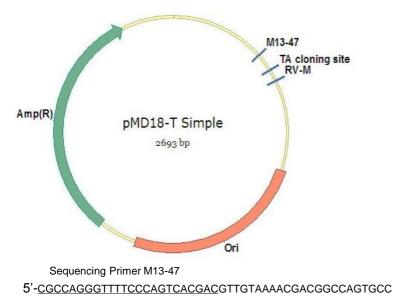

### **Vector Information**

pMD18-T Simple Vector is a high-efficiency TA cloning vector constructed from pUC18, of which the initial multiple cloning sites (MCS) were destroyed. The pMD18-T Simple Vector is 2.6kb in size and contains the ampicillin resistance gene for selection. The coding sequence was inserted by TA cloning at site 425.

Notes: The direction of cDNA insertion into the TA-cloning vector is random, maybe forward or reverse. For insert orientation information, please feel free to contact us.
