Mouse CSF3R Gene ORF cDNA clone in cloning vector

Catalog Number: MG51178-G

General Information

Gene: colony stimulating factor 3 receptor

(granulocyte)

Official Symbol: CSF3R

Synonym: Cd114; Csf3r; Csfgr; G-CSF-R; G-CSFR;

MGC141472; MGC141473

Source: Mouse

cDNA Size: 2514bp

RefSeq: NM_007782.2

Plasmid: PGEM-mCSF3R

Description

Lot: Please refer to the label on the tube

Sequence Description:

Identical with the Gene Bank Ref. ID sequence except for the point mutations: 1551T/C,1743G/A,1824G/A,1839C/T not causing the amino acid variation;1136G/A(S379N).

Vector:

pGEM-T

Quality control:

The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.

Sequencing primer list:

M13-47: 5' GCCAGGGTTTTCCCAGTCACGAC 3'

RV-M: 5' GAGCGGATAACAATTTCACACAGG 3'

Other M13 primers can also be used as sequencing primers.

Shipping carrier:

Each tube contains approximately 10 µg of lyophilized plasmid.

Storage:

The lyophilized plasmid can be stored at ambient temperature for three months.

Plasmid Resuspension protocol

- 1. Centrifuge at 5,000×g for 5 min.
- 2. Carefully open the tube and add 100 μl of sterile water to dissolve the DNA.
- Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000 \times g.
- 5. Store the plasmid at $-20 \,^{\circ}$ C.

The plasmid is ready for:

- · Restriction enzyme digestion
- PCR amplification
- E. coli transformation
- · DNA sequencing

E.coli strains for transformation (recommended but not limited)

Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5 α and TOP10F $^{\prime}$.

Mouse CSF3R Gene ORF cDNA clone in cloning vector

Catalog Number: MG51178-G

Vector Information

The pGEM-T vector is a high-efficiency TA cloning vector which contains multiple cloning sites as shown below. The pGEM-T vector is 3.0kb in size and contains the ampicillin resistance gene for selection. The coding sequence was inserted by TA cloning.

Notes: The direction of cDNA insertion into the TA-cloning vector is random, maybe forward or reverse. For insert orientation information, please feel free to contact us.

Physical Map of pGEM-T:
