Shipping carrier :
Each tube contains approximately 10 $\mu$ g of lyophilized plasmid.
Storage :
The lyophilized plasmid can be stored at ambient temperature for
three months.
Plasmid Resuspension protocol
1. Centrifuge at 5,000 $\times$ g for 5 min.
2. Carefully open the tube and add 100 $\mu l$ of sterile water to
dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room
temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate
the liquid at the bottom. Speed is less than 5000 $ imes$ g.
5. Store the plasmid at $-20$ °C.
The plasmid is ready for:

- Restriction enzyme digestion
- PCR amplification
- E. coli transformation
- DNA sequencing

## *E.coli* strains for transformation (recommended but not limited)

Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5 $\alpha$  and TOP10F'.

## **Vector Information**

All of the pCMV vectors are designed for high-level stable and transient expression in mammalian hosts. High-level stable and non-replicative transient expression can be carried out in most mammalian cells. The vectors contain the following elements:

•Human enhanced cytomegalovirus immediate-early (CMV) promoter for high-level expression in a wide range of mammalian cells.

• Hygromycin resistance gene for selection of mammalian cell lines.

• A Kozak consensus sequence to enhance mammalian expression.

Vector name	pCMV3-C-Myc
Vector size	6164bp
Vector Type	Mammalian Expression Vector
Expression Method	Constiutive ,Stable / Transient
Promoter	CMV
Bacterial Resistance	Kanamycin
Selection In Cells	Hygromycin
