Flow cytometric analysis of human CXADR expression on HT-29 cells. HT-29 cells were stained with FITC-conjugated anti-Human CXADR. The histogram were derived from gated events with the forward and side light-scatter characteristics of intact cells.

Flow cytometry was performed on a BD FACSCalibur flow cytometry system. Please refer to www.sinobiological.com/Flow-Cytometry-FACS-Protocols-a-750.html for technical protocols.
