# Human WT1 transcript variant b Gene ORF cDNA clone expression plasmid, C-Flag tag

Catalog Number: HG29789-CF

**General Information** 

Gene: Wilms tumor 1

Official Symbol: WT1

**Synonym:** AWT1; EWS-WT1; GUD; NPHS4; WAGR;

WIT-2; WT33

Source: Human

cDNA Size: 1599bp

Plasmid pCMV3-WT1-tb-Flag

**Description** 

Lot: Please refer to the label on the tube

**Sequence Description:** 

The translated amino acid sequence is identical with NP\_077742.3.

Restriction site: Kpnl + Xbal(6kb+1.6kb)

Vector: pCMV3-C-FLAG

**Quality control:** 

The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.

Sequencing primer list:

pCMV3-F: 5' CAGGTGTCCACTCCCAGGTCCAAG 3'

pcDNA3-R: 5' GGCAACTAGAAGGCACAGTCGAGG 3'

Or

Forward T7: 5' TAATACGACTCACTATAGGG 3'

ReverseBGH: 5' TAGAAGGCACAGTCGAGG 3'

pCMV3-F and pcDNA3-R are designed by Sino Biological Inc. Customers can order the primer pair from any oligonucleotide supplier.

#### Shipping carrier:

Each tube contains approximately 10 µg of lyophilized plasmid.

#### Storage:

The lyophilized plasmid can be stored at ambient temperature for three months.

### **Plasmid Resuspension protocol**

- 1. Centrifuge at 5,000×g for 5 min.
- 2. Carefully open the tube and add 100  $\mu$ l of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than  $5000 \times g$ .
- 5. Store the plasmid at  $-20 \,^{\circ}$ C.

## The plasmid is ready for:

- · Restriction enzyme digestion
- PCR amplification
- · E. coli transformation
- · DNA sequencing

# *E.coli* strains for transformation (recommended but not limited)

Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5 $\alpha$  and TOP10F $^{\prime}$ .

# Human WT1 transcript variant b Gene ORF cDNA clone expression plasmid, C-Flag tag

Catalog Number: HG29789-CF

#### **Vector Information**

All of the pCMV vectors are designed for high-level stable and transient expression in mammalian hosts. High-level stable and non-replicative transient expression can be carried out in most mammalian cells. The vectors contain the following elements:

- •Human enhanced cytomegalovirus immediate-early (CMV) promoter for high-level expression in a wide range of mammalian cells.
- Hygromycin resistance gene for selection of mammalian cell lines.
- A Kozak consensus sequence to enhance mammalian expression.

Vector Name pCMV3-C-FLAG

Vector Size 6158bp

Vector Type Mammalian Expression Vector Expression Method Constitutive, Stable / Transient

Promoter CMV

Antibiotic Resistance Kanamycin Selection In Mammalian Cells Hygromycin

Protein Tag FLAG
