

Anti-Bax antibody

Description Bax is a protein encoded by the BAX gene which is approximately 21,1

kDa. Bax is localised to the mitochondrion membrane and cytoplasm. It is involved in PEDF induced signalling, apoptosis modulation and signalling and the TNFR1 pathway. This protein falls under the BCL2 protein family. It forms a heterodimer with BCL2, and functions as an apoptotic activator. This protein interacts with, and increases the opening of, the mitochondrial voltage-dependent anion channel, which leads to the loss in membrane potential and the release of cytochrome c. Bax is expressed in a wide variety of tissues. Mutations in the BAX gene may result in colorectal cancer and leukaemia. STJ91820 was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. This polyclonal antibody detects endogenous levels of Bax protein.

Model STJ91820

Host Rabbit

Reactivity Human, Mouse, Rat

Applications ELISA, IF, IHC

Immunogen Synthesized peptide derived from human Bax

Immunogen Region 30-110 aa, Internal

Gene Symbol BAX

Dilution range IHC 1:100-1:300IF 1:200-1:1000ELISA 1:5000

Specificity Bax Polyclonal Antibody detects endogenous levels of Bax protein.

Tissue Specificity Expressed in a wide variety of tissues. Isoform Psi is found in glial tumors.

Isoform Alpha is expressed in spleen, breast, ovary, testis, colon and brain, and at low levels in skin and lung. Isoform Sigma is expressed in spleen, breast, ovary, testis, lung, colon, brain and at low levels in skin. Isoform Alpha and isoform Sigma are expressed in pro-myelocytic leukemia, histiocytic lymphoma, Burkitt's lymphoma, T-cell lymphoma, lymphoblastic leukemia, breast adenocarcinoma, ovary adenocarcinoma, prostate c

The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Note For Research Use Only (RUO).

Protein Name Apoptosis regulator BAX Bcl-2-like protein 4 Bcl2-L-4

Molecular Weight 17 kDa

Purification

Clonality Polyclonal

Conjugation Unconjugated

Isotype IgG

Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Concentration 1 mg/ml

Storage Instruction Store at -20°C, and avoid repeat freeze-thaw cycles.

Alternative Names Apoptosis regulator BAX Bcl-2-like protein 4 Bcl2-L-4

Function Accelerates programmed cell death by binding to, and antagonizing the

apoptosis repressor BCL2 or its adenovirus homolog E1B 19k protein. Under stress conditions, undergoes a conformation change that causes translocation to the mitochondrion membrane, leading to the release of cytochrome c that then triggers apoptosis. Promotes activation of CASP3, and thereby apoptosis.

Sequence and Domain Family Intact BH3 motif is required by BIK, BID, BAK, BAD and BAX for their pro-

apoptotic activity and for their interaction with anti-apoptotic members of the

Bcl-2 family.

Cellular Localization Isoform Alpha: Mitochondrion membrane. Single-pass membrane protein.

Cytoplasm. Colocalizes with 14-3-3 proteins in the cytoplasm. Under stress conditions, undergoes a conformation change that causes release from JNK-phosphorylated 14-3-3 proteins and translocation to the mitochondrion

membrane.. Isoform Beta: Cytoplasm.. Isoform Gamma: Cytoplasm.. Isoform

Delta: Cytoplasm
