Alternative Names	Receptor tyrosine-protein kinase erbB-3 Proto-oncogene-like protein c-ErbB-3 Tyrosine kinase-type cell surface receptor HER3
Function	Tyrosine-protein kinase that plays an essential role as cell surface receptor for neuregulins. Binds to neuregulin-1 (NRG1) and is activated by it; ligand-binding increases phosphorylation on tyrosine residues and promotes its association with the p85 subunit of phosphatidylinositol 3-kinase . May also be activated by CSPG5 .
Sequence and Domain Family	The cytoplasmic part of the receptor may interact with the SH2 or SH3 domains of many signal-transducing proteins.
Cellular Localization	Isoform 1: Cell membrane. Single-pass type I membrane protein.. Isoform 2: Secreted.
Post-translational Modifications	Autophosphorylated . Ligand-binding increases phosphorylation on tyrosine residues and promotes its association with the p85 subunit of phosphatidylinositol 3-kinase .
