Alternative Names Serine/threonine-protein phosphatase 2A 65 kDa regulatory subunit A beta

isoform PP2A subunit A isoform PR65-beta PP2A subunit A isoform R1-beta

Function The PR65 subunit of protein phosphatase 2A serves as a scaffolding molecule

to coordinate the assembly of the catalytic subunit and a variable regulatory B

subunit.

Sequence and Domain Family Each HEAT repeat appears to consist of two alpha helices joined by a

hydrophilic region, the intrarepeat loop. The repeat units may be arranged

laterally to form a rod-like structure.
