

## Anti-Rhodopsin antibody

|                           |                                                                                                                       |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------|
| <b>Description</b>        | Rabbit polyclonal to Rhodopsin.                                                                                       |
| <b>Model</b>              | STJ95452                                                                                                              |
| <b>Host</b>               | Rabbit                                                                                                                |
| <b>Reactivity</b>         | Human, Mouse, Rat                                                                                                     |
| <b>Applications</b>       | ELISA, IHC, WB                                                                                                        |
| <b>Immunogen</b>          | Synthesized peptide derived from human Rhodopsin around the non-phosphorylation site of S334.                         |
| <b>Immunogen Region</b>   | 270-350 aa                                                                                                            |
| <b>Gene ID</b>            | <a href="#">6010</a>                                                                                                  |
| <b>Gene Symbol</b>        | <a href="#">RHO</a>                                                                                                   |
| <b>Dilution range</b>     | WB 1:500-1:2000IHC 1:100-1:300ELISA 1:5000                                                                            |
| <b>Specificity</b>        | Rhodopsin Polyclonal Antibody detects endogenous levels of Rhodopsin protein.                                         |
| <b>Tissue Specificity</b> | Rod shaped photoreceptor cells which mediates vision in dim light.                                                    |
| <b>Purification</b>       | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. |
| <b>Note</b>               | For Research Use Only (RUO).                                                                                          |
| <b>Protein Name</b>       | Rhodopsin Opsin-2                                                                                                     |
| <b>Molecular Weight</b>   | 42 kDa                                                                                                                |
| <b>Clonality</b>          | Polyclonal                                                                                                            |

|                                         |                                                                                                                                                                                                                                                                                              |
|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Conjugation</b>                      | Unconjugated                                                                                                                                                                                                                                                                                 |
| <b>Isotype</b>                          | IgG                                                                                                                                                                                                                                                                                          |
| <b>Formulation</b>                      | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.                                                                                                                                                                                                                      |
| <b>Concentration</b>                    | 1 mg/ml                                                                                                                                                                                                                                                                                      |
| <b>Storage Instruction</b>              | Store at -20°C, and avoid repeat freeze-thaw cycles.                                                                                                                                                                                                                                         |
| <b>Database Links</b>                   | <a href="#">HGNC:10012OMIM:180380</a>                                                                                                                                                                                                                                                        |
| <b>Alternative Names</b>                | Rhodopsin Opsin-2                                                                                                                                                                                                                                                                            |
| <b>Function</b>                         | Photoreceptor required for image-forming vision at low light intensity. Required for photoreceptor cell viability after birth. Light-induced isomerization of 11-cis to all-trans retinal triggers a conformational change leading to G-protein activation and release of all-trans retinal. |
| <b>Cellular Localization</b>            | Membrane. Synthesized in the inner segment (IS) of rod photoreceptor cells before vectorial transport to the rod outer segment (OS) photosensory cilia.                                                                                                                                      |
| <b>Post-translational Modifications</b> | Phosphorylated on some or all of the serine and threonine residues present in the C-terminal region.; Contains one covalently linked retinal chromophore.                                                                                                                                    |
