Alternative Names Mediator of RNA polymerase II transcription subunit 21 Mediator complex

subunit 21 RNA polymerase II holoenzyme component SRB7 RNAPII

complex component SRB7 hSrb7

Function Component of the Mediator complex, a coactivator involved in the regulated

transcription of nearly all RNA polymerase II-dependent genes. Mediator functions as a bridge to convey information from gene-specific regulatory proteins to the basal RNA polymerase II transcription machinery. Mediator is recruited to promoters by direct interactions with regulatory proteins and serves as a scaffold for the assembly of a functional preinitiation complex

with RNA polymerase II and the general transcription factors.
